Reale ITES

Rehost legacy applications with the Tuxedo ART agent for OpCon

Modernizing Legacy Applications with OpCon

Reale Information Technology Engineering Services (ITES) is a leader in the insurance, banking, real estate and services sectors, protecting more than 4.5 million policyholders. With almost 3,700 employees in Italy, Spain and Chile, Reale ITES is the first transnational business enterprise within the Reale Group.

In recent years, radical and rapid changes have made the global market increasingly complex and competitive. Reale ITES realized they needed to modernize the IT department to keep up with industry changes and maintain their competitive edge. After reviewing replacement products for their existing automation tools (IBM TWS and OPC), OpCon proved to be the best solution. Reale ITES began their modernization journey with SMA Technologies to completely transform their automation processes.

International group offering solutions in the insurance, banking, real estate and services sectors.

- More than 4.5 million policyholders
- 3,700 Employees
- Solvency II ratio of 202% at IV quarter 2017
- 7,000 Applications
- 60 Servers
- 15,000 jobs per day

CHALLENGE	SOLUTION	BENEFITS
The TWS and OPC schedulers lacked options and flexibility	OpCon™ provides a high level of flexibility and a impressive set of features	Automation processes, workflows and dependencies are now more efficient
Legacy infrastructure and applications were unreliable	OpCon™ provides a reliable automation environment for legacy and open systems platforms	Reale ITES now has a modern infrastructure with reliable automation processes in place
Needed to migrate from a mainframe to a new platform without disrupting current processes	OpCon™ provides the capability to switch between execution platforms from a single point-of-control	Without disrupting current processes, Reale ITES successfully moves jobs from the mainframe to Tuxedo ART with OpCon™

"Thanks to OpCon, system management is not a pain for us anymore"
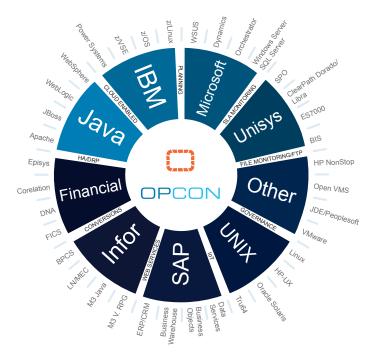

Antonio Motta, Infrastructure Manager

Efficient Conversion

An important aspect of Reale ITES conversion project was their need to keep their downtime to a minimum. SMA Technologies had an existing TWS and OPC to OpCon conversion process that required services; however, Reale ITES needed their staff to be in control. SMA Technologies updated the conversion tools so the Reale ITES team could easily choose workflows and convert them to OpCon.

The automated conversion meant that Reale ITES did not have to rewrite their JCL scripts and employees could focus on other areas of the modernization project. The conversion went quickly and easily with the tools provided by SMA Technologies. As a result, tactical business activities are modernized and Reale ITES relies on OpCon as their Digital Automation Platform for legacy and open environments.

Benefits of Modernization with OpCon

- Lower system management cost
- Superior reporting capabilities
- Easily switch between execution platforms
- Reliable digital automation platform

"The Flexibility of OpCon allows us to follow the growing strategy of the company"

Antonio Motta, Infrastructure Manager

Rehosting with Tuxedo ART and SMA Technologies

After the migration to OpCon, Real ITES decided to implement Oracle's Tuxedo ART platform to rehost their legacy IBM Z mainframe processes. In response, SMA Technologies expanded our suite of integrations to include Tuxedo ART. Not only that, we created a conversion tool that easily moves jobs across the platforms.

Reale ITES successfully migrated their first workflows to Tuxedo ART with ease. Now, they are confidentusing OpCon to implement their modernization strategy across the business.
